THE COMPANY

Investment objective

The Company's investment objective is to generate long-term shareholder returns, predominantly in the form of capital growth, by investing in businesses and opportunities that are demonstrably delivering or benefiting significantly from the efficient use of energy and resources, irrespective of their size, location or stage of development.

To reflect its non-benchmarked total return investment strategy, the Company uses RPI+3% as its primary long term financial performance comparator. In addition to this absolute return performance measure, the Company also uses a range of specialist, sectoral and peer group benchmarks to assess its relative performance.

Investment Policy

The Company's investment objective is pursued through constructing a conviction-driven portfolio consisting primarily of direct listed and unlisted holdings across asset classes and geographies.

Asset allocation

The Company invests, either directly or through external funds, in a portfolio that is comprised of three main allocations:

- listed equity;
- yield assets; and
- special situations.

The flexibility to invest across asset classes affords the Company two main benefits:

- it enables construction of a portfolio based on an assessment of market cycles; and
- it enables investment in all opportunities which benefit from the investment theme.

It is expected that the portfolio will comprise approximately 15 to 30 positions.

Geographic focus

Although the portfolio is predominantly focused on investments in developed markets, if opportunities that present an attractive risk and reward profile are available in emerging markets then these may also be pursued.

While many of the companies forming the portfolio will be headquartered in the UK, USA or Europe, it should be noted that many of those companies are global in nature so their reporting currency may not reflect their actual geographic or currency exposures.

Investment restrictions

Subject to any applicable investment restrictions contained in the Listing Rules from time to time, the Portfolio Manager will not make an investment if it would cause the Company to breach any of the following limits at the point of investment:

- no more than 20% of the Company's gross assets may be invested, directly or indirectly through external funds, in the securities of any single entity; and
- no more than 20% of the Company's gross assets may be invested in a single external fund.

In addition, the Listing Rules currently restrict the Company from investing more than 10% of its total assets in other listed closed-ended investment funds, save that this investment restriction does not apply to investments in closed-ended investment funds which themselves have published investment policies to invest no more than 15% of their total assets in other listed closed-ended investment funds. The Company will comply with this investment restriction (or any variant thereof) for so long as such restriction remains applicable.

Hedging

The Company may enter into any hedging or other derivative arrangements which the Portfolio Manager (within such parameters as are approved by the Board and the AIFM and in accordance with the Company's Investment Policy) may from time to time consider appropriate for the purposes of efficient portfolio management, and the Company may for this purpose leverage through the use of options, futures, options on futures, swaps and other synthetic or derivative financial instruments.

Cash Management

There is no restriction on the amount of cash or cash equivalent instruments that the Company may hold and there may be times when it is appropriate for the Company to have a significant cash position instead of being fully or near fully invested.

Borrowing

The Company's borrowing policy, set by the Board, is that the Company may incur indebtedness for working capital and investment purposes, up to a maximum of 20% of the Net Asset Value at the time of incurrence. The decision on whether to incur indebtedness may be taken by the Portfolio Manager within such parameters as are approved by the AIFM and the Board from time to time. There will be no limitations on indebtedness being incurred at the level of the Company's underlying investments (and measures of indebtedness for these purposes accordingly exclude debt in place at the underlying investment level).

Leverage

The AIFM Directive prescribes two methods of measuring and expressing leverage (as opposed to gearing) and requires disclosure of the maximum amount of 'leverage' the Company might be subject to. The definition of leverage is wider than that of gearing and includes exposures that are not considered to contribute to gearing, such as derivatives.

The Company has currently set a limit of 200% on both the Gross Method and the Commitment Method (calculated after offset of hedging or netting arrangements). The Company's leverage calculated as at 31 December 2020 under the methods stipulated by the AIFM Directive was 144.9% under the Gross Method and 100.2% under the Commitment Method.

The Company will disclose the following on its website at the same time as it makes its annual report and accounts available to investors or more frequently in the event of the following:

- any changes to the maximum level of leverage that may be employed by the Company;
- any changes to the right of reuse of collateral or any guarantee granted under the leveraging arrangements; and
- the total amount of leverage employed by the Company.

Circumstances in which the Company may deploy leverage and the types of leverage permitted

The Company may use leverage through the use of derivatives – typically currency forwards and options, equity index futures and options, used to hedge exposures.

Hedging: The Company may deploy derivatives to manage its exposure to foreign currency risk; The use of derivatives for hedging purposes is consistent with the investment objective. As a global investor, many of the shares owned are in foreign jurisdictions, exposing the Company's Sterling Net Asset Value to currency translation risk. To hedge against this, currency forwards may be employed to reduce foreign currency exposure and increase Sterling exposure.

The use of derivatives, including their nature and size, is disclosed in the "Notes to the Financial Statements" in the latest Report & Accounts.

Dividend policy

The Company complies with the United Kingdom's investment trust rules regarding distributable income and the Company's dividend policy is that the Company will only pay dividends sufficient to maintain investment trust status. Subject to these rules, any dividends and distributions will be at the discretion of the Board from time to time.

Changes to the Investment Policy

The Company is required to obtain the prior approval of shareholders, by ordinary resolution, for any material change to its published Investment Policy. The Company will announce any such change through a Regulatory Information Service.

Any change in investment strategy or Investment Policy which does not amount to a material change to the Company's published investment policy may be made by the Company without shareholder approval.

The manner in which sustainability risks are integrated into the investment decisions of the AIFM.

The AIFM has delegated its portfolio management function to Menhaden Capital Management LLP and therefore does not take any investment decisions on behalf of the Company.

The Company is an externally managed investment trust within the AIC Environmental Sector and invests in companies and markets that are demonstrably delivering or benefiting significantly from the efficient use of energy or resources. The Board believes that the integration of financially material environmental, social and governance ("ESG") factors into investment decision-making can reduce risk and enhance returns. In addition, the ongoing engagement and dialogue with investee companies, including through proxy voting, are key parts of an asset stewardship role. Accordingly, the Directors encourage the Portfolio Manager to ensure the Company's investments adhere to best practice in the management of ESG issues and encourages them to have due regard to the UN Global Compact and UN Principles of Responsible Investment.

Thematically, the Portfolio Manager seeks to invest in opportunities, publicly traded or private, which either demonstrably deliver or benefit significantly from the more efficient use of energy and resources. All investment opportunities are assessed through a value lens, with the aim of acquiring investments with low downside risk, backed by identifiable assets and cash flows, at attractive valuations. The Portfolio Manager seeks to invest with a long-term perspective, and with high conviction.

The likely impacts of sustainability risks on the returns of the Company

Menhaden Capital Management LLP and the AIFM have determined that the sustainability risk (being the risk that the value of the Company could be materially negatively impacted by an environmental, social or governance event or condition) faced by the Company, given that ESG factors are integrated into the investment process, is low and it has not been listed amongst the Company's principal risks and uncertainties in its Annual Report.
